3. Determine the ATA (Archery Trade Association) rating velocity of your bow.
4. Factor variables to the “standard compound setup” to determine calculated bow weight. For compounds the “standard setup” includes use of a release aid and a brace height greater than 6.5”. Deviations from the standard compound setup require factoring in each variable as follows:
   - **Brace height**: less than 6.5” - add 5 lbs to calculated bow weight.
   - **Release hand**: left hand - add 5 lbs to calculated bow weight.

**DETERMINING ARROW LENGTH**

**Point Weights**

- 70 grains: subtract 3 lbs of bow weight
- 100 grains: no adjustment
- 125 grains: add 3 lbs of bow weight
- 150 grains: add 6 lbs of bow weight

**Recalculate for Optional Bow Weight**

Use the following formula:

$\text{New Weight} = \text{Old Weight} + \frac{\text{Peak Bow Weight} \times \text{New Draw Length}}{\text{Old Draw Length}}$

**ADJUSTING THE CHART TO YOUR BOW SET-UP**

The Hunting Chart is based on a Bow Speed Rating of 301-340 FPS and 100-grain points. If your set-up is different, make the following adjustments to your bow weight.

**BOW SPEED RATING**

- **351 FPS or Higher**: add 10 lbs of bow weight
- **341-350**: add 5 lbs of bow weight
- **331-340**: add 3 lbs of bow weight
- **321-330**: add 2 lbs of bow weight
- **311-320**: add 1 lb of bow weight
